## **Biometric Support**

December, 2003

ReportWare is pleased to announce introduction of new biometric identification support. We have long supported the ID3D-R Hand Reader from Recognition Systems for employee clock in and out, however many users have found the hardware cost (over \$3,000) of this unit prohibitive.

We have successfully integrated fingerprint readers, most recently adding support for the Sony FIU-600 Unit, and have developed a new, more user-friendly interface which takes advantage of the power and flexibility of these new units. These are available immediately! These units are attractively priced (just \$495 each, with full software support). Our readers support secure management access, as well as employee clock in and out, using only the user's fingerprint.

Biometrics prevent buddy punching, lost passwords, and a host of other problems. Please call us for more information. At present, these units require a PC (Mac not yet supported) with USB support (Windows 98SE or later, including XP).
